Activity	Description
Anagram	Rearrange the letters to unscramble the words. It allows for hints, and even hints with a picture to help. You can set a timer, adjust the speed of the game and include up to five anagrams in one game.
Category sort - Image	Drag and drop the images into the correct category. Self checking!
Category sort - Text	Drag and drop the words or images into the correct category. Self checking!
Hot Spots	- You place dots in a background based on the instructions in the top red bar. The background can be a world map, a human body, a grid, a Venn diagram, or add your own image. Set hot spots and a question. Participants touch the area on the image to respond to the question. This activity can be scored. The game is good for reviewing how to label an object. To add an image to the game, drag the image onto the work area and send it behind the game by selecting Order > Send to Back from the object drop-down menu.
Image Arrange	Put the pictures in order. This one is great for sorting, ordering, or patterns.
Image Match	Match the picture with the correct labels. Match up to five terms to their corresponding images or Gallery objects. To add an image to the activity, drag the image onto the work area and send it behind the activity by selecting Order > Send to Back from the object drop-down menu.
Image Select	Allows you to import up to 18 images. The images appear in a large box and the students have to select or write in the correct label.
Keyword match	A drag and drop table. Drag each word into place next to the appropriate description
Multiple Choice	Create up to 10 multiple choice questions and specify the correct answers. Feedback (i.e. correct, try again) is provided during the activity and a score at the end.
Note Reveal	Notes appear and are hidden when the number is pressed
Pairs	Just like classic memory game- works with both text and images just drag and drop images on to the tiles in the setup. You can change and modify the number of tile pairs.
Sentence Arrange	Drag and drop the sentences (or single words) to put them in order. Create
Tiles	This application reveals what is behind it, one square at a time. You can select how many squares you want. You can put text, an image, or multiple images behind the tiles. Use between 8 and 35 tiles to hide and reveal an image, Gallery object or text. To add an image to the activity, drag the image onto the work area, and send it behind the activity by selecting Order > Send to Back from the object drop-down menu. You can also add text to the front of the tiles to create quiz games and puzzles.
Timeline reveal	Click on a labeled dot to reveal information. Great for dates on a timeline, but the interval between dots is fixed. With some creativity it can be used for more than just time.
Vortex sort - images	The vortex is a fancy sorting tool - the answers will only go into the correct vortex, and spin out of the incorrect choice. There are both text and image options.
Vortex sort - text	The vortex is a fancy sorting tool - the answers will only go into the correct vortex, and spin out of the incorrect choice. There are both text and image options.
Word Biz	Spell out the answer to the question in the box. Participants select letters, in the correct order, from a grid to answer a question you set in advance. This activity can be timed, and you can modify the speed. You can include up to eight words in one Word biz game, making this game a good choice for reviewing spelling and vocabulary words.
Word Guess	Very fun! It's just like hangman, with the choices of soccer, basketball, or the tomato splat. Choose the letters to try to guess the missing word. Fun vocabulary practice. You can include up to 10 words in one game.
